Ideation Phase
Empathize & Discover

Date	3 October 2026
Team ID	SWTID-2026-9253
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas:

The user is a ServiceNow administrator or data operator who needs to import employee data accurately and efficiently. The user wants to avoid manual data entry and ensure proper source-to-target field mapping. The main concerns are data-entry errors, incorrect field mapping, duplicate or incorrectly matched records, and difficulty verifying the transformation. Using **Import Sets, Transform Maps, Map Assist, Coalesce, and Transform History** provides a structured process that improves accuracy, reduces manual effort, and makes the import results easier to verify.
