Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

Problem–Solution Fit

The identified problem is that importing multiple employee records into ServiceNow through manual data entry is time-consuming and can lead to incorrect or inconsistent data. The customer, represented by the ServiceNow administrator or data operator, needs a structured and reliable way to transfer employee data from a source file into the target table. Our solution uses **ServiceNow Import Sets and Transform Maps** to automate the movement of source data into the **Employee Test** table. **Auto Map Matching Fields and Map Assist** help establish the required source-to-target field mappings, while **Coalesce** supports appropriate record matching during transformation. The administrator can then use **Transform History** to verify whether the data was transformed successfully. Thus, the proposed solution directly addresses the customer's need by reducing manual effort, improving data-mapping accuracy, supporting proper record handling, and providing a clear way to verify the imported data.

Purpose:

Purpose

- **Understand the existing employee data-import process in ServiceNow.**
- **Identify problems in manual data entry and data migration.**
- **Identify issues with incorrect or incomplete field mapping.**
- **Understand difficulties in matching existing employee records.**
- **Reduce manual effort and data-entry errors.**
- **Provide a structured process using Import Sets and Transform Maps.**
- **Improve data accuracy, consistency, and verification.**
- **Ensure the solution fits the needs of ServiceNow administrators and data operators.**
