Project Design Phase
Proposed Solution Template

Date	3october 2026
Team ID	SWTID-2026-9253
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Importing multiple employee records manually into ServiceNow is time-consuming and can lead to data-entry errors, incorrect field mapping, and improper handling of existing records. A structured method is required to import spreadsheet data accurately into the required ServiceNow table.
2.	Idea / Solution description	The solution uses ServiceNow Import Sets and Transform Maps to import employee data from a spreadsheet into the Employee Test target table. The spreadsheet is loaded into an Import Set, and a Transform Map is created to connect the source fields with the target fields. Auto Map Matching Fields and Map Assist are used for field mapping, while Coalesce is configured for appropriate record matching. The transformed records are then verified using Transform History.
3.	Novelty / Uniqueness	The solution provides a structured and reusable spreadsheet-to-ServiceNow import workflow instead of manually creating employee records. The combination of Transform Maps, Auto Map Matching Fields, Map Assist, and Coalesce provides controlled field mapping and record matching within the ServiceNow platform.
4.	Social Impact / Customer Satisfaction	The solution reduces repetitive manual work for ServiceNow administrators and improves the accuracy and consistency of employee data. It saves time, reduces the possibility of data-entry mistakes, and provides a clear way to verify the transformation results, improving the overall user experience.
5.	Business Model (Revenue Model)	The solution reduces repetitive manual work for ServiceNow administrators and improves the accuracy and consistency of employee data. It saves time, reduces the possibility of data-entry mistakes, and provides a clear way to

		verify the transformation results, improving the overall user experience.
6.	Scalability of the Solution	The solution reduces repetitive manual work for ServiceNow administrators and improves the accuracy and consistency of employee data. It saves time, reduces the possibility of data-entry mistakes, and provides a clear way to verify the transformation results, improving the overall user experience.
