Project Design Phase-II
Data Flow Diagram & User Stories

Date	3 October 2026
Team ID	SWTID-2026-9253
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

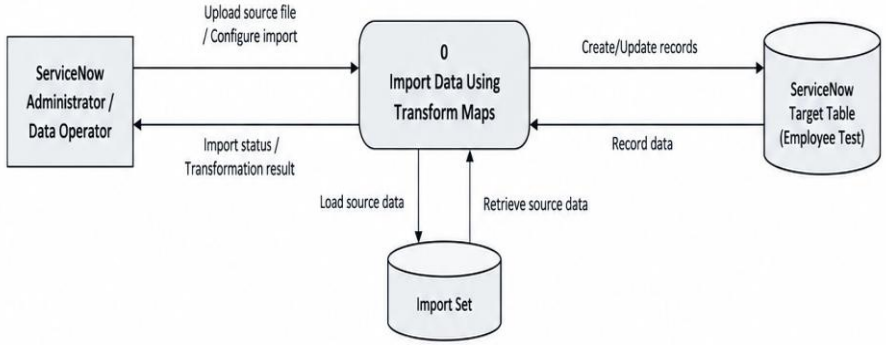

Data Flow Diagrams:

Source Employee File
↓
Import Set
↓
Create Transform Map
↓
Map Fields
(Auto Map / Map Assist)
↓
Configure Coalesce
↓
Transform Data
↓
Employee Test Table
↓
Check Transform History

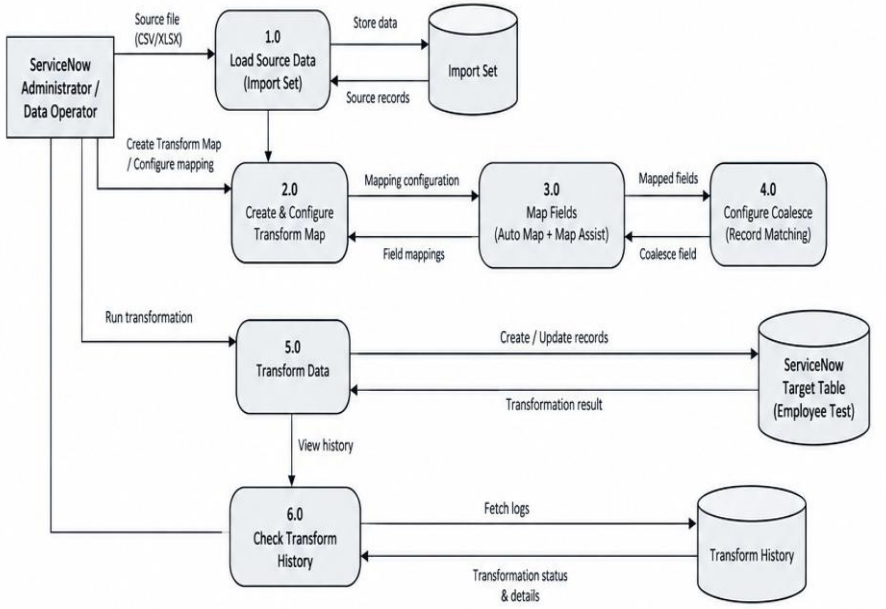

That is the cleanest compact DFD for our project.

Data Flow Diagram – Import Data Using Transform Maps (ServiceNow)

Context Level DFD (Level 0)

Level 1 DFD (Detailed View)

User Stories

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
ServiceNow Administrator / Data Operator		USN-1	As a ServiceNow administrator, I can load employee data from a source file into an Import Set so that the data is available for transformation.	The source file is successfully imported and the employee records are available in the Import Set table.	High	Sprint-1
ServiceNow Administrator / Data Operator	Create Transform Map	USN-2	As a ServiceNow administrator, I can create a Transform Map between the Import Set table and the Employee Test target table.	A Transform Map is created with the correct source and target tables.	High	Sprint-1
ServiceNow Administrator / Data Operator	Field Mapping	USN-3	As a ServiceNow administrator, I can map source fields to the corresponding target fields using Auto Map Matching Fields and Map Assist.	The required source fields are correctly mapped to their corresponding target fields.	High	Sprint-1
ServiceNow Administrator / Data Operator	Record Matching	USN-4	As a ServiceNow administrator, I can configure a Coalesce field to identify matching employee records during transformation.	The selected field is configured as Coalesce and is used for appropriate record matching during transformation.	High	Sprint-1
ServiceNow Administrator / Data Operator	Transform Data	USN-5	As a ServiceNow administrator, I can transform the imported employee data into the Employee Test target table.	The transformation completes successfully and the employee records are created or updated in the target table.	High	Sprint-1
ServiceNow Administrator / Data Operator	Verify Transformation	USN-6	As a ServiceNow administrator, I can view Transform History to verify the result of the data transformation.	Transform History displays the transformation execution and its result, allowing the imported records to be verified.	High	Sprint-1
