**Project Design Phase-II**
**Technology Stack (Architecture & Stack)**

| | |
|---|---|
| Date | 3 october2026 |
| Team ID | SWTID-2026-9253 |
| Project Name | Import Data using Transform Maps (Spreadsheet) |
| Maximum Marks | 4 Marks |

# Architecture Flow

**ServiceNow Administrator / Data Operator**
↓
**ServiceNow Web Interface**
↓
**Import Set**
↓
**Import Set Table / Source Records**
↓
**Transform Map**
↓
**Auto Map Matching Fields / Map Assist**
↓
**Coalesce – Record Matching**
↓
**Transformation Process**
↓
**Employee Test Target Table**
↓

**Transform History – Verification**

## Components & Technologies

| Component | Description | Technology |
|---|---|---|
| User Interface | Interface through which the administrator uploads data, creates the Transform Map, configures mappings, performs transformation, and checks the result. | ServiceNow Web UI |
| Application Logic-1 | Imports the employee source file and stores the imported records in an Import Set table. | ServiceNow Import Sets |
| Application Logic-2 | Maps source fields to corresponding target fields and controls the transformation process. | ServiceNow Transform Maps |
| Application Logic-3 | Supports field mapping and record matching during transformation. | Map Assist, Auto Map Matching Fields and Coalesce |
| Database | Stores the imported source records and transformed employee records. | ServiceNow Tables |
| Cloud Database | ServiceNow's cloud-based platform stores and manages the application data and tables. | ServiceNow Platform Database |
| File Storage | The source employee data is provided as an import file for loading into the Import Set. | CSV / Excel source file |
| External API-1 | No external API is required for this project. | Not Applicable |
| External API-2 | No external API is required for this project. | Not Applicable |
| Machine Learning Model | No machine learning model is used. The project uses ServiceNow's built-in data import and transformation features. | Not Applicable |
| Infrastructure (Server / Cloud) | The project is developed and executed within the ServiceNow cloud platform using a ServiceNow developer instance. | ServiceNow Cloud Platform |

## Application Characteristics

| Characteristics | Description | Technology |
|---|---|---|
| Open-Source Frameworks | No external open-source framework is required. The project uses built-in ServiceNow platform features. | ServiceNow Platform |
| Security Implementations | Access to the ServiceNow instance and project data is controlled through authenticated user access and platform permissions. | ServiceNow Authentication & Access Controls |
| Scalable Architecture | The Import Set and Transform Map workflow can handle additional employee records without changing the overall process. | ServiceNow Import Sets & Transform Maps |
| Availability | The application is available through the ServiceNow cloud platform whenever the configured instance is accessible. | ServiceNow Cloud Platform |
| Performance | Data transformation is performed within ServiceNow, reducing the need for manual record-by-record entry and allowing multiple imported records to be processed through a single transformation. | |
